DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-25, drawn to a method for treating a patient, classified in class 604, subclass 28.
 - II. Claims 26-43, drawn to an infusion device, classified in class 604, subclass 503.
2. Groups I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used with a materially different process. For example, it can be used to administer medication, without there being an infection or substantial risk of infection.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. During a telephone conversation with Mr. Coy on 5/22/03 a provisional election was made without traverse to prosecute the invention of a method for treating a patient, claims 1-25. Affirmation of this election must be made by applicant in replying to this Office action. Claims 26-43 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1, 2, and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Sodemann (6166007).

Sodemann discloses an antimicrobial lock and a method of inhibiting or preventing infection and blood coagulation in or near a medical prosthetic device has been inserted in a patient comprising administering to the device a pharmaceutically effective amount of a composition comprising an antimicrobial taurinamide derivative that are combined with a biologically acceptable acid or biologically accepted salt thereof so as to produce a pH for the ultimate composition that is no higher than 7, preferably in the range of from about 3.5 to about 6.5 more preferably in the range of from about 4.5 to about 6.5 (See Col. 11, Lines 30-40). Various lock solution acid concentrations are mixed 50/50 by weight with fresh whole human blood (See Col 15, Lines 26-30).

Allowable Subject Matter

7. Claims 3-5, and 7-25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
